

Federal Chief Information Officers Council

March 21, 2002

Dear Electronic Business Executives and Practitioners:

The Federal CIO Council is co-hosting the Spring Secure E-Business Executive Summit addressing the latest strategies, architectures and technologies for secure e-government. The conference is May 23-24 at the Ronald Reagan Building in Washington, DC. The Secure E-Business Executive Summit is a best practices seminar for government information technology (IT) leaders, standards communities, integrators, and industry practitioners.

The Secure E-Business Summit is a joint effort between the Federal CIO Council, Department of Defense, the National Information Assurance Partnership, and industry.

Please join us in supporting the Secure E-Business Summit so we may all better learn how to transform our business processes into secure E-business solutions. The conference will foster the exchange of best practices and lessons learned in Architectures and Infrastructure within both the Federal and Commercial industries.

Symposium Topics:

- Advances in Enterprise Architectures
- Critical success factors for Critical Information Infrastructure
- Web Services and Information Assurance at the crossroads
- Emerging standards and technologies for securable web infrastructures

I encourage your attendance and support of the Secure E-Business Executive Summit. I also encourage your organization to participate by speaking, sponsoring and attending the conference. We see the conference as a catalyst promoting the sharing of 'lessons learned' achieving future cost savings/efficiencies within the federal IT community.

For additional information please visit www.SecurE-Biz.net, or contact Cameron Argetsinger at the Interoperability Clearinghouse (ICHnet.org), a non-profit architecture consortium and organizer of this summit. Phone: (703) 768-0400, email: cameron@secure-biz.net.

Thank you in advance for your support of this e-government initiative!

Sincerely,

Lee Holcomb
